SYSTEMS AND METHODS FOR AUTOMATICALY COLLECTING, FORMATTING AND STORING MEDICAL DEVICE DATA IN A DATABASE

ABSTRACT OF THE DISCLOSURE

5   The present invention provides systems and methods for gathering, formatting, storing and/or distributing medical information. In one exemplary embodiment, the present invention provides for centralized maintenance of medical information derived from a patient visit, and for distributed access to various medical information by, for example, researchers, the patient, the patient's physician, a specialist, and/or other recipients. Thus, for example, a
10   patient may visit their physician and during that visit the physician may read information from an implantable medical device associated with the patient, make other objective measurements of the patient, and record various subjective information about the patient. All of this information can be uploaded and maintained on a variably accessible system.
